Address: Bangkok, Thailand

Objective

Cybersecurity-focused Computer Science graduate with hands-on experience in **IAM/PAM (CyberArk)**, **system integration**, and **enterprise infrastructure support**. Experienced in integrating CyberArk solutions within client environments, along with **troubleshooting and debugging across Windows and Linux systems**. Strong foundation in **least-privilege, RBAC**, and **identity lifecycle management**, complemented by knowledge in **web security and penetration testing**. Highly adaptable, quick to learn, and eager to contribute to secure and scalable systems in real-world environments.

Education

- King Mongkut's University of Technology Thonburi** **Bangkok, Thailand**
Bachelor of Science in Computer Science, GPAX 3.81
Aug 2022 – May 2026

Relevant Coursework

Web Developing, Networking, Operation Systems, Security, Artificial Intelligence

Certificates

CyberArk Defender - PAM CyberArk	April 2026
ISO/IEC 27001:2022 INFORMATION SECURITY ASSOCIATE SkillFront, Credential ID – 99188785568707	Dec 2024
Certified in Cybersecurity (CC) ISC2, Credential ID – 1998144	Nov 2024
Certified Professional Penetration Tester (eCPPTv2) eLearn Security, Credential ID – 109278859	July 2024
Google IT Support Specialization Google, Credential ID – LLP69YGMRASQ	Feb 2024

Professional Experience

Brillar Cyber Security Engineer	Feb 2025 – Now
- Provided solutions to clients with <i>CyberArk</i>'s centralized platform that bring together <i>IAM</i> and <i>PAM</i> capabilities. - Supported CyberArk PAM deployments for major enterprise clients, including projects for “Mandai” and “Singtel”, focusing on secure privileged access, platform hardening, and operational optimization. - Created custom Plugins for PSM (privileged session management) and CPM (Central Policy Management) for both thick client and thin client, using automation with RestAPI and so on. (for 12+ different appliance types)	

- For “**ASM**” client, we architected and deployed an automated identity orchestration system using CyberArk Identity Flows, integrating ManageEngine MDM and CyberArk EPM for a zero-trust travel exemption workflow that automated multi-factor authentication enforcement by synchronizing real-time mobile geolocation data with CyberArk EPM policies.
- For “**Perth Airport**” client, we automated the Joiner, Mover, and Leaver (JML) identity lifecycle by engineering workflows for Active Directory provisioning, birthright role assignments, & dynamic name-collision resolution to ensure unique username & email generation at enterprise scale. We also made those workflows to be successfully integrated with WorkDay and ServiceNow sides.

Projects

- **HARMONI**
 - Created a sophisticated chatbot using Google Dialogflow & real-time chat functionality as a part of big project.
 - Tech Stack: TypeScript, Node.js, Socket.io, Express.js, Prisma ORM, JWT, Postman
- **MoodLift**
 - Mobile Application for private diary to enhance user’s emotional well-being by providing real-time mood analysis, personalized feedback and mood statistics
 - Used Natural Language Processing NLP to interpret diary entries and adapt user interface accordingly along with the audio sound.
 - Tech Stack: Flutter, Flask, MongoDB, Firebase Authentication, Hugging Face API, Postman
- **Exercise Count & Yoga Poses Detection**
 - Fitness monitoring system using body pose-estimation to count repetitions of exercises (push-up, jumping-jack, curl-up, squat)
 - Track durations of Yoga pose (tree, triangle, easy seat, child)
 - Tech Stack: Python, tkinter, YOLOv8 Pose Estimation, Mediapipe, Google Colab
- **Virtual Clothing Try-on Platform**
 - AI-powered fashion tech system integrating 3D avatar generation, virtual try-on, wardrobe management, and ML-based recommendations.
 - Built an end-to-end virtual try-on system enabling users to visualize outfits on 2D and fully generated 3D avatars.
 - Developed wardrobe management, allowing users to upload personal clothing items, mix-and-match, and generate try-on images with both owned and vendor clothing.
 - Built intelligent fashion recommendation modules: 1) Image-based similarity matching using InceptionV3 feature extraction 2) Text-to-fashion search using Sentence Transformers + cosine similarity
 - Tech Stack: Flutter, React.js, Flask, Node.js, MongoDB, Firebase Auth, InceptionV3, Sentence Transformers, Power BI, Gemini API

Skills

- **Programming Languages** – Java, JavaScript, TypeScript, Python, PHP, SQL, Dart, Bash
- **Operation Systems** – Linux, Windows
- **Tools** – Burp Suite Enterprise, Nessus Enterprise, Docker, Postman, Git, Jenkins
- **Languages** - Burmese, English

Additional Information

- Enthusiast to learn about new technology, methodology
- Possess strong problem-solving, analytical abilities.
- Demonstrates excellent communication and collaboration skills.
- Adaptable to high-pressure, fast-paced environments.
